SECTION - B

(Grammar Component)

IV. Read the following passage carefully and answer the questions set on it :

(5×1=5)

Artificial Intelligence (AI) is the ability of machines to perform tasks that normally require human intelligence. Today, AI is used in almost every field – from medicine and education to transportation and entertainment. For example, doctors use AI to detect diseases early, and students use AI tools to learn languages, solve problems, or prepare for exams. Self-driving cars use sensors and AI algorithms to observe the road, make decisions, and avoid accidents.

However, the rapid growth of AI also raises important questions. Many people worry that machines might replace human jobs, especially in industries like manufacturing and customer service. Others fear that relying too much on AI may reduce human creativity and critical thinking. Experts suggest that instead of fearing technology, society should focus on using AI responsibly. When used wisely, AI can save time, reduce errors, and help humans focus on tasks that require imagination and emotional understanding. The key is to balance technological advancement with ethical responsibility.

1. What is Artificial Intelligence?
2. Give two examples of, how AI is used in daily life.
3. Why do some people worry about the growth of AI?
4. How can AI be helpful to humans?
5. Find a synonym for "development" from the passage.

V. Do as directed :

1. Fill in the blanks with suitable articles.

(2)

She saw ____ owl perched on ____ branch of an old oak tree.
