

15EE61

## Sixth Semester B.E. Degree Examination, June/July 2018 Contro! System

Time: 3 hrs.

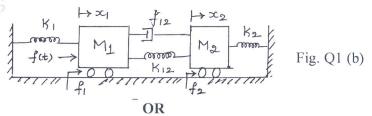

Max. Marks: 80

Note: Answer FIVE full questions, choosing one full question from each module.

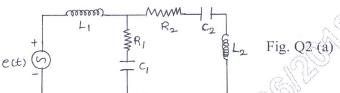

## Module-1

- a. With the help of neat block diagram, define open loop and closed loop control system.

  Mention any four difference between open loop and closed loop control system. (08 Marks)
  - c. Construct mathematical model for the mechanical system shown in Fig. Q1 (b). Draw electrical equivalent network based on force voltage analogy. (08 Marks)

2 a. Draw an equivalent mechanical network using force voltage analogy as shown in Fig. Q2 (a).

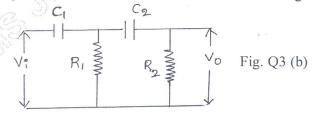

b. For the mechanical translation system as shown in Fig.Q2 (b). Draw the electrical network based on torque current analogy. Write its performance equations. (08 Marks)

Module-2

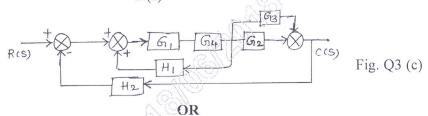

- a. Illustrate how to perform the following connection with block diagram reduction technique,(i) Shifting summing point after a block (ii) Shifting take off point ahead of a block.
  - Draw a signal flow graph and find its transfer function as shown in Fig. Q3 (b). (06 Marks)

2. Any revealing of identification, appeal to evaluator and /or equations written eg. 42+8 = 50, will be treated as malpractice. Important Note: 1. On completing your answers, compulsorily draw diagonal cross lines on the remaining blank pages.

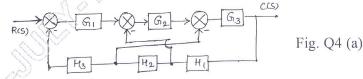

## 15EE61

c. Determine the transfer function,  $\frac{C(s)}{R(s)}$  of a system shown in Fig. Q3 (c). (06 Marks)

4 a. Obtain  $\frac{C(s)}{R(s)}$  using block diagram reduction rule.

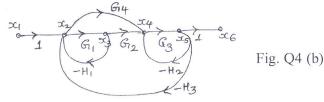

(08 Marks)

b. Find the transfer function  $\frac{x_5}{x_1}$  to the signal flow graph shown in Fig. Q4 (b). Apply the

Mason's gain formula.

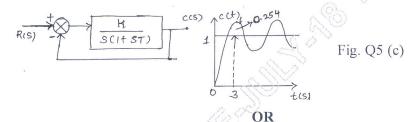

(08 Marks)

## Module-3

- 5 a. What are necessary and sufficient condition for a system to be stable according to RH criteria. (04 Marks)
  - b. Determine the stability of the system represent by following characteristic equation,  $s^5 + 4s^4 + 8s^3 + 8s^2 + 7s + 4 = 0$ . (04 Marks)
  - c. The system shown in Fig. Q5 (c) when subjected to a unit step input gives an output response shown in Fig. Q5 (c). Determine the value of K and T from response curve.

(08 Marks)

a. A system oscillate with frequency "ω" if it has a pole at s = ±jω and no pole in right half of s plane. Determine the value of K and 'a' so that the system shown in Fig. Q6 (a). Oscillate at a frequency of 2 rad/sec.

b. For the system  $G(s)H(s) = \frac{K}{s^2(s+2)(s+3)}$  find the value of K to limit steady state error to

10 unit when input to the system is  $1+10t+\frac{40t^2}{2}$ . (08 Marks) 2 of 3 Module-4

- 7 a. For a single loop unity feedback system whose open loop transfer function is  $G(s) = \frac{K(s+3)}{s(s+2)}$  show that complex part of root locus is a circle and identify center and radius. (06 Marks)
  - b. Draw the bode plot for the system having  $G(s) = \frac{10}{s(1+0.01s)(1+0.1s)}$ , H(s) = 1.

Determine:

- (i) Gain crossover frequency and phase margin.
- (ii) Phase cross over frequency and gain margin.

(10 Marks)

OR

- 8 a. Sketch complete root locus of system having  $G(s)H(s) = \frac{K}{s(s+1)(s+2)(s+3)}$ . (10 Marks)
  - b. Find the open loop transfer function of a system whose approximate plot is as shown in Fig. Q8 (b). (06 Marks)

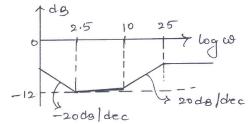

Fig. Q8 (b)

Module-5

- 9 a. Explain the step by step design procedure of lead compensation network. (08 Marks)
  - b. Sketch the Nyquist plot by unity feedback system whose open loop transfer function,  $G(s) = \frac{5}{s(1-s)}$ . Determine stability of a system using Nyquist stability criteria. (08 Marks)

OR

10 a. Explain Nyquist stability criteria.

(04 Marks)

b. What is controller? Explain the effect of PI and PD controller on second order system.

(06 Marks)

c. Explain the principle of Argument in Nyquist stability criteria.

(06 Marks)
