Sixth Semester B.E. Degree Examination, Dec.2018/Jan.2019 Finite Element Method

Time: 3 hrs.

Max. Marks: 80

Note: Answer any FIVE full questions, choosing one full question from each module.

Module-1

1. a. Explain plane stress and plane strain problem in FEM. (06 Marks)
- b. Using principle of minimum potential energy determine nodal displacements.

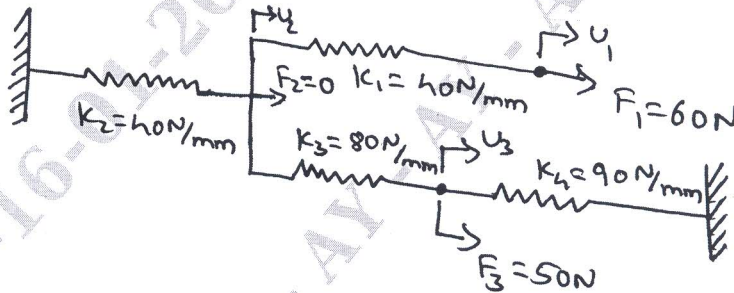

Fig Q1(a)

(10 Marks)

OR

2. a. Use Rayleigh- Ritz method to find stress and displacement at midpoint of a bar shown in Fig Q2(a) below assuming 2nd order polynomial. Take $E = 70 \text{ GPa}$, $A = 100 \text{ mm}^2$.

Fig Q2(a)

(10 Marks)
(06 Marks)

- b. Explain simplex, complex and multiplex elements.

Module-2

3. a. Solve for stresses in members of structure given below :

$$\begin{aligned}
 P &= 4000 \text{ N} \\
 A_1 &= 1600 \text{ mm}^2 \\
 A_2 &= 800 \text{ mm}^2 \\
 E_{al} &= 806 \text{ Pa} \\
 E_{steel} &= 2106 \text{ Pa}
 \end{aligned}$$

Fig Q3(a)

- b. Derive shape function for 2 noded Bar element in natural co-ordinate system.

(10 Marks)
(06 Marks)

Important Note : 1. On completing your answers, compulsorily draw diagonal cross lines on the remaining blank pages.
2. Any revealing of identification, appeal to evaluator and /or equations written eg, 42+8 = 50, will be treated as malpractice.

OR

- 4 Determine Nodal displacement and element stresses for given truss.

Fig Q4

Take : $E = 210\text{GPa}$, $A = 600\text{mm}^2$

(16 Marks)

Module-3

- 5 a. Using Lagrangian functions obtain shape functions for nine node rectangular element. (10 Marks)
 b. Explain properties of shape function. (06 Marks)

OR

- 6 a. Derive shape function for constant strain triangular element. (08 Marks)
 b. With usual notations obtain shape function for tetrahedral element. (08 Marks)

Module-4

- 7 a. Explain isoparametric, sub parametric and super parametric element. (08 Marks)
 b. Evaluate the following integral using two point Gauss integration method

$$I = \int_{-1}^1 (a_0 + a_1x + a_2x^2 + a_3x^3 + a_4x^4) dx$$

(08 Marks)

OR

- 8 a. Explain preprocessing and post processing. (08 Marks)
 b. Determine the temperature distribution in a plane wall of thickness 60mm, which has an internal heat source of $0.3 \times 10^6 \text{ W/m}^3$ and the thermal conductivity of material is $21 \text{ W/m}^\circ\text{C}$. Assume that surface temperature of the wall is 40°C use 1-D linear bar element and consider wall as axisymmetric system. (08 Marks)

Module-5

- 9 Obtain temperature distribution in composite wall as shown in Fig Q9. Using 1-D elements

Fig Q9
2 of 3

(16 Marks)

OR

- 10 Find the natural frequencies of longitudinal vibration of the constrained stepped bar shown in Fig Q10 and plot mode shapes.

Fig Q10

Take Young's modulus = E . density = P for given material.

(16 Marks)
