17EC36

Third Semester B.E. Degree Examination, Feb./Mar.2022

Engineering Electromagnetics

Time: 3 hrs.

Max. Marks: 100

Note: Answer any FIVE full questions, choosing ONE full question from each module.

Module-1

- 1 a. State and explain Coulomb's law in vector form. (07 Marks)
b. Let a point charge of $Q_1 = 20 \text{ nC}$ be located at $A(3, -1, 5)$ and a charge of $Q_2 = 40 \text{ nC}$ be located at $B(-2, 3, 0)$. Find force \vec{F} at $C(1, 2, 3)$ having charge of Q_3 of $10 \text{ } \mu\text{C}$ in free space. (08 Marks)
c. Define electric field intensity \vec{E} and explain the method of obtaining \vec{E} at a point in Cartesian co-ordinate system due to point charge Q . (05 Marks)

OR

- 2 a. Obtain the expression for electric field \vec{E} due to infinite line charge with charge density of $\rho_L \text{ C/m}$, at point P on y -axis at a distance ' r ' from the origin. The line is placed along z -axis. (08 Marks)
b. Define electric flux density \vec{D} . Obtain the expression for \vec{D} due to point charge and infinite line charge. (06 Marks)
c. Find \vec{D} at $P(6, 8, -10)$ m due to uniform infinite line charge with charge density (ρ_L) of $40 \text{ } \mu\text{C/m}$ on z -axis. (06 Marks)

Module-2

- 3 a. State and prove Gauss's law. (08 Marks)
b. Find $\text{div } \vec{D}$ for the following field,
(i) $\vec{D} = (2xy - y^2)\vec{a}_x + (x^2z - 2xy)\vec{a}_y + x^2y\vec{a}_z \text{ C/m}^2$ at $P_1(2, 3, -1)$.
(ii) $\vec{D} = 2rz^2 \sin^2 \phi \vec{a}_r + rz^2 \sin 2\phi \vec{a}_\phi + 2r^2z \sin^2 \phi \vec{a}_z \text{ C/m}^2$ at $P_2(r = 2, \phi = 110^\circ, z = -1)$ (06 Marks)
c. State and Prove divergence theorem. (06 Marks)

OR

- 4 a. Obtain the expression for potential difference by bringing a unit positive charge from Point B to Point A. The point B is at r_B distance and point A is at r_A from the origin. (06 Marks)
b. Show that the energy required to assemble ' n ' number of point charges in an empty space is,
$$W_E = \frac{1}{2} \sum_{m=1}^n Q_m V_m \text{ (08 Marks)}$$

c. Find the workdone in moving $+2\text{C}$ charge from $B(2, 0, 0)$ m to $A(0, 2, 0)$ m along the straight line joining the two points. Assume that the electric field \vec{E} is $12x\vec{a}_x - 4y\vec{a}_y \text{ V/m}$. (06 Marks)

Module-3

- 5 a. Starting from Gauss's law in point form, deduce Poisson's and Laplace's equations. (06 Marks)
b. Two plates of parallel plate capacitor are separated by the distance of ' d ' m and maintained at zero and V_0 voltages respectively. Determine capacitance between these two plates. (08 Marks)
c. State and explain Biot-Savart law. (06 Marks)

OR

- 6 a. Obtain the expression for \vec{H} in all the regions if a cylindrical conductor carries a direct current I and its radius is 'R' m. Plot the variation of \vec{H} against the distance r from the centre of the conductor. (08 Marks)
- b. Given the general vector $\vec{A} = \sin 2\phi \vec{a}_\phi$ in cylindrical co-ordinate system. Find curl of \vec{A} at $\left(2, \frac{\pi}{4}, 0\right)$. (06 Marks)
- c. Explain the concept of scalar and vector magnetic potentials. (06 Marks)

Module-4

- 7 a. Derive Lorentz force equation. (06 Marks)
- b. Obtain the expression for magnetic force between two current elements and hence for current loops. (08 Marks)
- c. A current element of 2 m in length lies along y axis centred at origin. The current is 5A in \vec{a}_y direction. If it experience a force $1.5 \frac{(\vec{a}_x + \vec{a}_z)}{\sqrt{2}}$ N due to uniform field \vec{B} . Determine \vec{B} . (06 Marks)

OR

- 8 a. In certain region, the magnetic flux density of magnetic material with $X_m = 6$ is given by $\vec{B} = 0.005y^2 \vec{a}_x$ T. At $y = 0.4$ m, find the magnitude of \vec{J} . (06 Marks)
- b. Derive the expression for the energy density in the magnetostatic fields. (08 Marks)
- c. Tabulate the similarities of the electric and magnetic circuits. (06 Marks)

Module-5

- 9 a. A conductor of 1 cm in length is parallel to z-axis and rotates at radius of 25 cm at 1200 rpm. Find induced voltage if the radial field is given by, $\vec{B} = 0.5 \vec{a}_r$ T. (06 Marks)
- b. Derive Maxwell's equation in point form from Ampere's circuit law and Gauss's law for static field. (08 Marks)
- c. List Maxwell's equation in point form and integral form. (06 Marks)

OR

- 10 a. Derive the General Wave equation starting from Maxwell's equations. (08 Marks)
- b. A 300 MHz uniform plane wave propagates through fresh water for which $\sigma = 0$, $\mu_r = 1$ and $\epsilon_r = 78$. Calculate attenuation constant, phase constant, wavelength and intrinsic impedance. (06 Marks)
- c. State and prove pointing theorem. (06 Marks)
