ABSTRACT

'A STUDY TO ASSESS THE PSYCHO-SOCIAL EFFECT OF COVID-19 ON GENERAL POPULATION AT CHIKKABANAVARA PRIMARY HEALTH CENTER, BANGALORE.'

Background

Objectives:

- To study the psycho-social effect of Covid-19 of people in the state of Karnataka
- To identify the common psycho-social disorder and adjustment of problems

Method:

Descriptive approach was used, sample size is 100. The tool was used as self-developed and standardized tool. The sample technique used was Random Sample Technique. The data was collected by using self-structured administered questionnaire.

Result

- Male participants were more than female
- Overall standard deviation=2.59
