ACKNOWLEDGEMENT

I would like to express my deepest gratitude to my thesis guide, Ar. Gayathri S Pillai for invaluable guidance, support, and encouragement throughout the course of my thesis. The expertise, insights, and attention to detail have been instrumental in shaping the direction and quality of my work.

I am also thankful for their willingness to devote countless hours to reviewing my drafts, providing constructive feedback, and challenging me to think critically and creatively about my ideas.

I would also like to extend my appreciation to Ar. Malavika and Ar. Archana who have provided me with valuable advice, resources, and assistance during my time as a student. Their contributions have helped me to grow both personally and professionally, and I am truly grateful for their guidance.

I want to express my appreciation for the opportunity to conduct this research project and complete my thesis.

Finally, I would like to thank my friends for their support, and understanding throughout this process. Their encouragement and belief in me have been instrumental in helping me to achieve my goals.

This experience has allowed me to develop critical research, analytical, and problem-solving skills, which will undoubtedly benefit me in my future endeavours.

Thank you all for your remarkable support and for helping me to reach this important milestone in my academic journey.

ABSTRACT

As an architecture student, the development of the fishermen community can be a challenging yet rewarding topic of study. The fishing industry is an essential part of many coastal communities worldwide, providing employment and contributing to local economies.

The development of the fishermen community involves addressing several issues, such as improving the living conditions of fishermen and their families, upgrading the fishing infrastructure, and promoting sustainable fishing practices.

The development of the fishermen community can also involve promoting cultural preservation and heritage tourism, which can contribute to the economic and social development of the community.

Overall, the development of the fishermen community as an architecture student involves a holistic approach that considers the economic, social, cultural, and environmental aspects of the community.

The goal is to create a sustainable and vibrant fishing community that provides a high quality of life for its residents while preserving the natural resources and heritage of the area.
