ACKNOWLEDGEMENT

Success is the fruit of hard work. The success was possible due to the collective efforts of so many personality to whom I express my gratitude. First, I am immensely grateful to **Prof Devi Nanjappan**, Principal, Smt Nagarathnamma College of Nursing, for giving me an opportunity to undertake the course under the Vinayaka Mission's University.

I express my deep sense of gratitude and appreciation to the Vice Principal, **Mrs. Snehalatha Reddy**, Professor, Smt. Nagarathnamma College of Nursing for providing opportunity to conduct this study.

I thank to all the members of the management of Acharya Institutes for their good wishes and timely support for completion of study.

My sincere thanks to my guide, **Mr. Syam Mohanlal**, M.Sc. (N), Associate Professor, Medical surgical Nursing, for her constant encouragement, valuable guidance, supervision and timely help during the entire course of study. I thank to all the faculty members of Smt Nagarathnamma College of Nursing for their guidance and encouragement who participated in the study. Without their co-operation, the study would not have been possible.

I extend my sincere thanks to **Ms. Meghana and Mrs. Haseena** Assistant librarian, Smt Nagarathnamma College of Nursing for extending necessary library facilities throughout the study indirectly to complete the study. Finally, yet importantly, I express my gratitude to my parents.

REGARDS

ABSTRACT

A case study was conducted on the patients having Tuberculosis in Chikkabanavara Govt Primary Health Centre with the objective of assessing the effectiveness of planned nursing care for the Patients having Tuberculosis. All patients were having signs and symptoms of Dyspnea, Chronic cough, one patient had hypovolemia, temperature irregularities. After using standardized tool for assessment and planned nursing care to the patients their recovery process was satisfactory. At the time of discharge or end of study the patient's major symptoms got relieved or alleviated and they and their relatives were satisfied with the care provided. Thus, it can be concluded that the planned nursing care was effective for the patients having Tuberculosis.
