ACKNOWLEDGEMENT

I would like to take this opportunity to express my sincere gratitude to all the individuals and organizations who have contributed to the successful completion of this research paper animal shelter.

Firstly, I would like to thank my guide Ar. Gracy Hepzibah David, for her guidance, constructive feedback, and support throughout the research process. Her expertise and knowledge have been invaluable in shaping this research paper.

I would also like to extend my thanks to the principal Ar. Sanjyot Shah and the faculty members of [Department Architecture] for their support and encouragement during the course of this research. Their academic guidance and expertise have been a valuable asset to the project.

I will also like to acknowledge the contribution of my family and friends, who have provided me with the necessary encouragement and support throughout the research process.

ABSTRACT

Pet overpopulation has long been stressing the shelters and undermining the bonds between people and animals. At the same time, a lot of animal shelter landscapes are in fair or poor conditions due to little attention being paid during shelter design and daily maintenance. This thesis reviews literature of interrelationships between animals, humans and the environment, develops an animal shelter landscape concept, generates guidelines from case studies, and applies them into a landscape design for an animal shelter. The main purpose of this thesis is to explore new opportunities for landscape architecture, spread awareness of animal welfare issues, and reconnect animals with people in the animal shelter landscape.

This thesis has been worked on with a goal to try to achieve the best possible Veterinary facility for companion animals. Best in terms of comfort, safety, and well-being of the animals. The quality of existing animal-oriented buildings is much below the quality of any human oriented building. The reason being nothing but negligence towards the environmental and sanitary conditions of such facilities. This project aims to rethink how the three core veterinary facilities are designed, keeping in mind the perspective of the end user.

After all, what is compassion if we do not see through the eyes of our dogs and cats?

INDEX WORDS:

landscape architecture, animal shelter landscape, interrelationships of humans, animals and environment
